                                                                                                                                                                                                                                                                                                                                                                                                                              pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, graft-versus-host disease, stroke, myocardial infarction, heart failure, neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency virus (HIV) infection). The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a contact.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encoding nucleic actus, cornell death, autoimmune diseases arthritis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated caspase recruitment domain (CAR containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM dome from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Reed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             containing the vector (e.g. bacteria, yeast, plant, animal, mammali and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell prolife or cell death, autoimmune diseases or inflammation, e.g. carcinometers.

In particular, the polypeptide and nucleic acid are useful for treating CC keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth cmuscle cell proliferation in arteries following balloon angioplasty CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, ca llargies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC (araft-versus-host disease, stroke, moyocardial infarction, heart failure, CC (amunodeficiency attroke, moyocardial infarction, heart failure, CC (alsease) or immunodeficiency associated disease (e.g. human CC (alsease) or immunodeficiency associated disease (e.g. human CC (alsease) or immunodeficiency associated disease (e.g. human CC (cc) availety of diagnostic applications. The present sequence is a CC (cDNA encoding a CARD domain containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local Similarity:

         AAH99166 to AAH99904 encode the human proteins given in AAM25225 to AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; antiplicer; osteopathic; dermatological; antiallergic; antiasthmatic;

The proteins due projections are seen therapy and vaccine encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemila, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression,

The sequence represents a cDNA which encodes the human caspase or recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a CC number of proteins that transmit signals that activate apoptosis and CC inflammatory pathways in response to stress and other stimuli. Therefore, CC CARD-12 and its corresponding nucleic acid may be used in treatment and CC diagnosis of patients suffering from disorders associated with an CC abnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include CC cancer, viral infections (e.g. caused by poxviruses, adenoviruses), cutoimmune disorders (e.g. systemic lupus crythematosis, arthritis), cc neurological disorders (e.g. Alzheimer's disease, amyotrophic lateral CC sclerosis), haematologic diseases (e.g. aplastic anaemia, myocardial cinfarction, stroke), inflammatory and immune system disorders (e.g. Sclerosis), stroke), inflammatory and immune system disorders (e.g. sclerosis), inflammatory and immune system disorders (e.g. coused by contact dermatitis, cc contact leprosy), ischaemic and hypoxic brain injury, kidney contact screenia/reperfusion injury, excitotoxic brain damage, acute bacterial cc meningitis and liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer; viral infection; poxvirus; adenovirus; autoimmune disorder; systemic lupus erythematosis; arthritis; neurological disorder; stroke; Alzheimer's disease; amyotrophic lateral sclerosis; haematologic disease; aplastic anaemia; myocardial infarction; inflammatory disorder; Crohn's disease; insulin-dependent diabetes; contact dermatitis; psoriasis; graft rejection; bacterial infection; lepromatous leprosy; tuberculosis; ischaemic brain injury; acute bacterial meningitis; kidney ischaemia; reperfusion injury; acute bacterial meningitis; excitotoxic brain damage; liver disease.

The CC secreted polypeptides and polynucleotides are useful for treating CC nervous and muscular diseases, for inhibiting tumour formation and CC metastasis, for treating gastrointestinal ulceration, for preventing CC and treating diseases in spinal cord, thyroid gland, ovary, prostate, CC renal gland, small intestine, heart, trachea, thymus, lymph node, CC muscular system and colon, for treating lipase deficiency in cystic CC fibrosis and pancreatitis, for treating undesirable clot formation CC such as myocardial infarction, during angioplasty and all surgical CC procedures that require decreased blood clot formation, for treating CC iver diseases, coagulation disorders and microbial diseases, for CC treating immune disorders, for treating inflammation and transplant CC rejection, for enhancing bone thickness and increasing bone density, CC apoptosis, and for regulating vascular smooth cell proliferation. They CC may also be used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              160
```

```
cc recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian cand insect cells) and an anti-CARD antibody. The CARD-containing cand insect cells) and an anti-CARD antibody. The CARD-containing cc polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), cc abnormal cell death (apoptosis), autoimmune diseases or inflammation. In cc particular, the polypeptide and nucleic acid are useful for treating cc keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth cc muscle cell proliferation in arteries following balloon angioplasty cc (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, cc allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, cc graft-versus-host disease, stroke, myocardial infarction, heart failure, cc allergies, arthritis disease, stroke, myocardial infarction, heart failure, cc meurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's cc alsease) or immunodeficiency virus (HIV) infection). The nucleic acids are useful con a variety of diagnostic applications. The present sequence is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynuclectides encoding them. Also included are a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arthritis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cell death, autoimmune diseases or inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA for the present sequence of the present sequence is a cDNA for the present sequence of the present sequence of the present sequence is a cDNA for the present sequence of the present sequence of the present sequence is a cDNA for the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the present sequence of the pres

CARD domains are found in a number of proteins that transmit signals that activate apoptosis and continuous pathways in response to stress and other stimuli. Therefore, CARD-12 and its corresponding nucleic acid may be used in treatment and diagnosis of patients suffering from disorders associated with an cabnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include cancer viral infections (e.g. caused by poxviruses, adenoviruses), concurological disorders (e.g. altaheimer's disease, amyotrophic lateral sclerosis), haematologic diseases (e.g. aplastic anaemia, myocardial colorin's disease, insulin-dependent diabetes, contact dermatitis, psortion's disease, insulin-dependent diabetes, contact dermatitis, comportations laprosy), ischaemic and hypoxic brain injury, kidney ischaemia/reperfusion injury, excitotoxic brain damage, acute bacterial

      CC cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate P CC expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell course of the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB7789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3355

                                                                                                                                                                                                                                                                                                derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greative study of probes for measuring gene expression, with far less biast than expressed sequence tag microarrays. The method is suitable for
                                                                                                                                                                rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular systems, cardiovascular disease, hypertension, cardiac arrhythmias and e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                              microarray; Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form specification, but was obtained in electronic format at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                analyzing

The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized distal colon library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 12-210, >LlpB3#LINE/L1 Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    451 Eckstein Medical Research Building Iowa City, IA 52242, USA Tel: 319 335 8250 Fax: 319 335 9565
